**MILSOFT UTILITY SOLUTIONS AND CLEVEST SOLUTIONS SUCCESSFULLY PASS THE LATEST VERSIONS OF MULTISPEAK® INTEROPERABILITY TESTS**

ABILENE, Texas – October 15, 2009 — Milsoft Utility Solutions, Inc. Milsoft Utility Solutions and Clevest Solutions Inc., leading providers of real time service, incident response systems and mobile workforce management solutions, have successfully collaborated in passing the latest MultiSpeak® Version 3 interoperability test and are the first companies to pass the Version 4 test! This testing is just another example of Milsoft’s renowned commitment to complete and open integration with complementary products, and partners, using the MultiSpeak® platform to drive the interoperability process.

“We remain absolutely committed to no-holds-barred integration with all the companies that our customers do business with, and there’s no doubt that MultiSpeak® is the best industry standard available to achieve universal interoperability” says Wayne Carr, CEO of Milsoft Utility Solutions.

The testing confirmed that Milsoft’s outage management system (DisSPatch® OMS) is capable of receiving AVL data from Clevest’s Mobile Field Force using MultiSpeak® web services. Clevest’s Mobile Field Force application serves as the central receiver for GPS and vehicle metadata transmitted from mobile devices. The Milsoft Web Server accepts real-time updates and backlog information on behalf of DisSPatch® and then prepares and stores the AVL data for display and interaction within DisSPatch® Client Map.

Assuming initial configuration parameters are defined, DisSPatch® users can display an icon on the screen representing the AVL data source and also have the capability to view the history of any single AVL data source in both tabular form and as breadcrumb icons on the DisSPatch® user map.

**About Milsoft Utility Solutions, Inc.**

Milsoft has provided powerful software solutions for power system professionals in over 1,000 rural electric cooperatives, municipalities, educational institutions, and consultant offices in the United States and abroad. Milsoft offers a suite of software solutions including Engineering Analysis, Outage Management, Integrated Voice Response, Geospatial Information Systems and Field Engineering to optimize utility performance and efficiency. Milsoft has developed an outstanding reputation for delivering quality products, services and support to the electric utility industry for over two decades and continues to thrive on product innovation and superior customer support.
